## Our Mission:

To be the market leader in the development, manufacture and worldwide sale of quality air moving and control equipment with total commitment to the customer. Our commitment to our customers is what drives our long-standing sustainability practices. We continuously strive to reduce energy usage and other production costs to ensure competitive prices for you and ongoing business success. We support the health, safety and training of our employees to achieve the high quality product performance you expect from ITT Grinnell — and deserve. And we take on the industry's most complex challenges by introducing innovative new product solutions to meet your future needs.

## Our Vision:

ITT Grinnell will be a company that exceeds customer expectations and that others strive to emulate. We will be the worldwide leader in providing timely, flexible and cost-effective solutions.

# Pipe Hangers and Supports General Specifications

The specifications in this catalogue complies with the engineering principles and standards from Manufacturers' Standardization Society (MSS), and other pertinent documents. The specifications are intended as a guide only, and it is the design engineer's responsibility to use it in conjunction with the data found in this catalogue to determine the best product or products for the user's application.

## I. MATERIAL DESIGN AND MANUFACTURE

All pipe hangers and supports shall be manufactured to comply with the latest edition of Manufacturers' Standardization Society. Where applicable, design and manufacture of these products should also conform to ANSI/ASME Code for Pressure Piping B31.1.

## II. SELECTION

### A) STANDARDS

All selection and installation of pipe hangers and supports shall conform to Manufacturers' Standardization Society (MSS) SP-58 & SP-69 and other specifications that may apply which are listed in this document.

### B) LOAD CALCULATIONS

Pipe hangers, supports, anchors and restraints must be selected to withstand all static and dynamic loading conditions which act upon the piping system and associated equipment. Piping supports and equipment must be considered as a total system and appropriate balance calculations made to determine load forces at critical stress points.

Loading conditions to be considered may include but are not limited to:

1. The total load of pipe, fittings, valves, insulation and any expected contents of the pipe.
2. Thermal expansion and contraction.
3. Stress from cycling of equipment or process.
4. Vibration transmitted to or from equipment or terminal connection.
5. Wind, snow or ice loading on outdoor piping.
6. Loading due to seismic forces if required by code or specification.

### C) STRUCTURAL LOADS

Static and dynamic forces at points of attachment must be considered to help ensure structural integrity of buildings or equipment. Pipe hangers and supports must be selected so as to minimize the effect of piping system loading on the structure.

## GENERAL SPECIFICATIONS

### D) MATERIALS

1. Appropriate materials and protective coatings shall be used to prevent failure from environmental and galvanic corrosion.
2. Material that comes in contact with pipe shall be compatible with piping material so that neither has a deteriorating effect on the other.

### E) PIPE ATTACHMENTS - HOT SYSTEMS

1. Hot systems are classified as those piping systems that have operating temperatures over 49°C (120°F).
2. Systems with operating temperatures over 232°C (450°F) require special designs for any pipe hangers or supports that are in direct contact with pipe. This is important in determining the raw materials needed as required by Manufacturers' Standardization Society (MSS) SP-58 & SP-69.
3. If piping is insulated, the connection of the pipe attachments to the pipe hanger rod shall be outside the insulation so that movement of the line will not cause damage to the insulation.

### F) PIPE ATTACHMENTS - AMBIENT SYSTEMS

Ambient systems are classified as those piping systems that have operating temperatures between 16°C (60°F) and 48°C (119°F).

### G) PIPE ATTACHMENTS - COLD SYSTEMS

1. Cold systems are classified as those piping systems that have operating temperature below 16°C (60°F).
2. Pipe hangers exposed to temperatures below -40°C (-40°F) require special design by the design engineer.

## III. FINISHES

### A) ZINC ELECTRO-GALVANIZED (ASTM B633)

This type of coating is recommended for use indoors in relatively dry areas. The steel is submerged in a bath of zinc salts, through the process of electrolysis, a coating of pure zinc adheres to the steel with a molecular bond. A maximum of 0.5 mils of zinc can be applied using this method.

### B) PRE-GALVANIZED (ASTM A653)

This type of coating is suitable for extended exposure in dry or mildly corrosive atmospheres but not generally recommended for use outdoors in industrial environments. Also known as "mill galvanized" or "hot-dip mill galvanized". Pre-Galvanized coatings are produced by rolling the steel coils or sheets through molten zinc, at the steel mill, the material is then cut or slit to size. Coating thickness is 0.90 ounces per square foot of steel surface. Zinc near the uncoated edges or weld areas becomes a sacrificial anode which protects the bare areas.

**C) HOT-DIP GALVANIZED (ASTM A123/A153)**

Recommended for prolonged outdoor exposure and will usually protect steel in most atmospheric environments. After fabrication the part is immersed in a bath of molten zinc. A metallurgical bond is formed resulting in a zinc coating that coats all surfaces including edges. Please note that some items cannot be hot-dip galvanized due to design, tolerances or threaded components. Threaded components on hot-dip galvanized products will be zinc electro-galvanized.

**D) EPOXY COATING**

Designed for use with copper tubing. This coating provides a superior level of corrosion protection compared to the traditional copper plating finish. It also insulates against dissimilar metal contact, thus preventing electrolysis. During the coating process, the parts are zinc plated to a thickness of 0.0002 inches, the copper or black color epoxy powder is applied by an electrostatic method, then the coated parts are baked at 82°C for 20 minutes.

**E) COPPER PLATING**

This coating is designed for copper tubing installations. The coating is intended to identify the product size only. This finish is not intended for corrosion resistance.

**F) PVC COATING**

PVC coating helps reduce noise and protect the pipe or tubing from the metal surface of the hanger. Corrosion resistance protection is minimal.

**IV. NOTE**

All dimensions are in inches unless otherwise noted.

## UNIVERSAL BEAM CLAMP WITH TAPPED HOLE

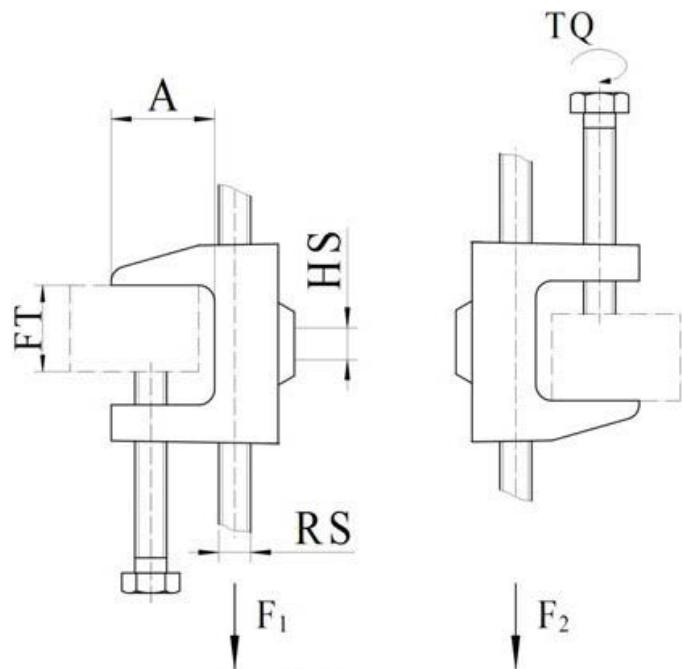

**FUNCTION:** Designed to attach 1/4" hanger rod from metal beams, channels, or angle iron. One through hole for easier installation of threaded rod.

**APPROVALS:** Complies with Manufacturers' Standardization Society (MSS) SP-58 & SP-69 (Type 19). Complies with Federal Specifications A-A-1192A (Type 19).

**MATERIAL:** Malleable Iron

**FINISH:** Zinc Electro-Galvanized

**NOTE:** Set screw must be tightened and torqued onto the sloped side of the I-beam. Recognizing that torque wrenches are generally not used or available on many job sites, the set screw should be tightened so it contacts the I-beam, and then an additional 1/4" to 1/2" turn added.

**FUNCTION:** Designed for attaching hanger rod or Spring Steel Fastener to I-beam.

**MATERIAL:** Spring Steel

**FINISH:** Armour

**NOTE:** Set screw must be tightened and torqued onto the sloped side of the I-beam.

## SMALL MOUTH BEAM CLAMP

**FUNCTION:** Designed for attaching hanger rod to the flange of a beam or bar joist, where flange thickness does not exceed 3/4".

**APPROVALS:** Complies with Manufacturers' Standardization Society (MSS) SP-58 & SP-69 (Type 19). Complies with Federal Specifications A-A-1192A (Type 19).

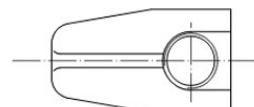

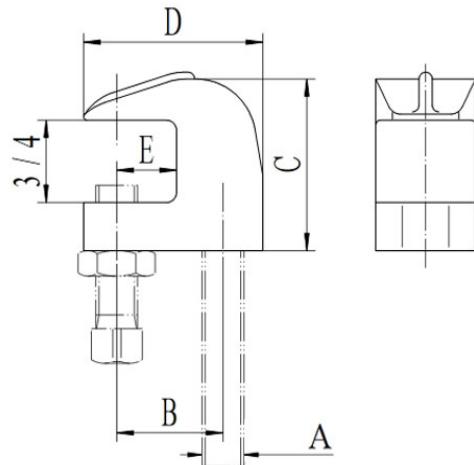

**CERTIFICATIONS:** Complies with Underwriters' Laboratories (UL) & (cUL) (EX16266, 406), (EX16204, JKL), Factory Mutual (FM), sizes 3/8" - 1/2" UL, cUL, FM approved

**MATERIAL:** Malleable Iron, with hardened steel cup point set screw

**FINISH:** Available in Plain and Zinc Electro-Galvanized

**NOTE:** Maximum recommended set screw torque value for 3/8"-16 set screw size is 60 in.-lbs. (nm 6.8). Caution should be taken not to over tighten set screw.

Set screw must be tightened and torqued onto the sloped side of the I-beam. Recognizing that torque wrenches are generally not used or available on many job sites, the set screw should be tightened so it contacts the I-beam, and then an additional 1/4" to 1/2" turn added.

## BEAM CLAMPS

I-FIG 201Z	Zinc
I-FIG 201SS	SS

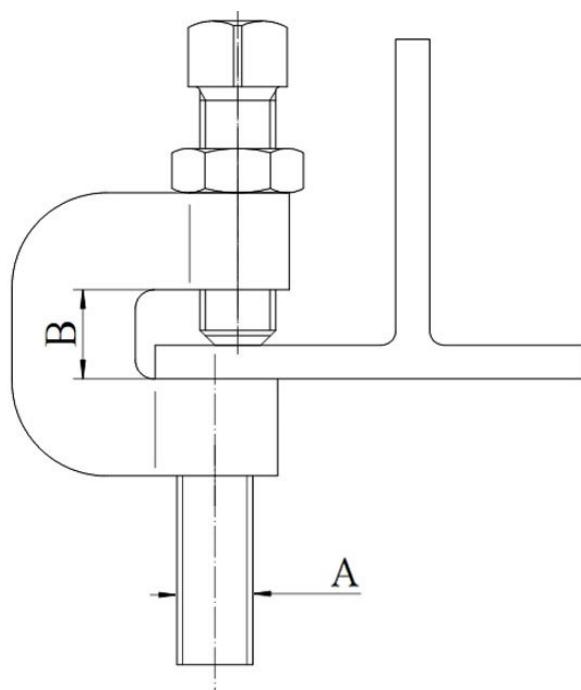

**FUNCTION:** Designed for attaching hanger rod to the bottom flange of a beam or bar joist, where the beam flange thickness does not exceed 3/4". The hanger rod should make contact with the beam flange to ensure full engagement.

**APPROVALS:** Complies with Manufacturers' Standardization Society (MSS) SP-58 & SP-69 (Type 23). Compiles with Federal Specification A-A-1192A (Type 23).

**MATERIAL:** Available in Carbon Steel with hardened steel cup set screw, and Stainless Steel with stainless steel cup set screw.

**FINISH:** Available in Zinc Electro-Galvanized and Stainless Steel

## STAMPED BEAM CLAMP TOP MOUNT

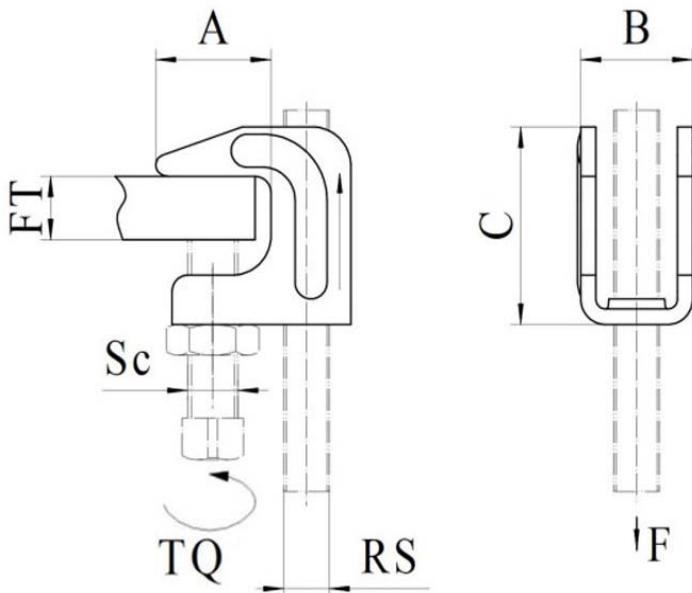

**FUNCTION:** Designed to allow structural attachment to metal beams, bar joist, channel, or angle iron in top mount position only, unless used on a parallel flange. The flange must be at least 3/16" thick and does not exceed 3/4".

**APPROVALS:** Complies with Manufacturers' Standardization Society (MSS) SP-58 & SP-69 (Type 19). Complies with Federal Specifications A-A-1192A (Type 19).

**MATERIAL:** Carbon Steel

**FINISH:** Pre-Galvanized

**NOTE:** Set screw must contact the sloped side of the I-beam, channel, or other applicable building structure. Clamp must always be installed in top orientation with the arrow mark on clamp pointing up, unless used on a parallel flange. On parallel flange surfaces, the clamp may be attached to the upper or lower flange but must be in the top orientation. When a torque wrench is unavailable, the set screw should be tightened so it contacts the I-beam, and then an additional 1/4" to 1/2" turn added.

### CENTER BEAM CLAMP

**FUNCTION:** Designed to be used in the suspension of a hanger rod from the center of an I-beam. The clamp's design allows the load to be distributed equally on either side of the beam. The clamp is adjustable from 2 3/8" to 7", and can be used with flange thicknesses up to 0.60". A-FIG 410 is usually used in conjunction with A-FIG 411 Extension Piece. An additional 1" or more of vertical adjustment is obtained when used with A-FIG 411 Extension Piece.

**APPROVALS:** Complies with Manufacturers' Standardization Society (MSS) SP-58 & SP-69 (Type 30). Complies with Federal Specifications A-A-1192A (Type 30).

**MATERIAL:** Malleable Iron, with carbon steel hardware

**FINISH:** Available in Plain and Zinc Electro-Galvanized

**NOTE:** Order A-FIG 411 Extension Piece separately if required

SWIVEL RING HANGERS

## **Section 3: Swivel Ring Hangers**

I-418

Zinc

**J-HANGER**

**FUNCTION:** Designed for the suspension of stationary piping systems. The "T" slot in the hanger permits the side bolt to be installed after installation and setting of pipe. The side hole permits optional wall mounting.

**APPROVALS:** Complies with Manufacturers' Standardization Society (MSS) SP-58 & SP-69 (Type 5). Complies with Federal Specifications A-A-1192A (Type 5).

**MATERIAL:** Carbon Steel

**FINISH:** Zinc Electro-Galvanized

## PIPE AND RISER CLAMPS

I-FIG 33M	Plain
I-FIG 33MZ	Zinc

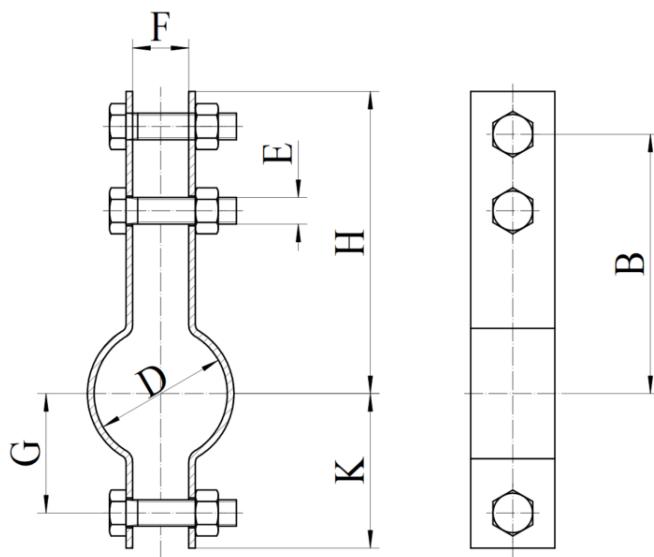

**FUNCTION:** Designed to be used in the suspension of non-insulated pipe lines.

**APPROVALS:** Complies with Manufacturers' Standardization Society (MSS) SP-58 & SP-69 (Type 4). Complies with Federal Specifications A-A-1192A (Type 4).

**MATERIAL:** Carbon Steel

**FINISH:** Available in Plain and Zinc Electro-Galvanized

## STAND OFF TWO HOLE STRAP FOR CPVC

**FUNCTION:** Designed to position fire sprinkler pipe 1 1/2" (38mm) off the mounting surface eliminating the need for wooden spacer blocks. It can be mounted in both vertical and horizontal positions on concrete, steel and wood. Used as a hanger and pipe restrainer. Features flared edges to protect piping as it slides through the installed fitting.

**APPROVALS:** Complies with Underwriters' Laboratories (UL) & (cUL) (EX15649, 772), sizes 3/4" - 2", shanghai vision mechanical. Complies with National Fire Protection Association (NFPA) 13.

**MATERIAL:** Carbon Steel, with mounting screws

**FINISH:** Zinc Electro-Galvanized

## WRAPAROUND STRAP FOR CPVC

**FUNCTION:** Designed to support CPVC fire sprinkler pipe horizontally from the side or bottom of beam. It must be installed with mounting tab oriented over top of piping on the side of a beam, it can only be used as a guide on top of beam or on vertical piping. It may be installed onto wood using supplied fasteners or into, minimum 20 gauge, steel using two 1/4" x 1" mounting screws. Features flared edges to protect piping as it slides through the installed fitting.

**APPROVALS:** Complies with Underwriters' Laboratories (UL) & (cUL) (EX15649, 769), sizes 3/4" - 2", shanghai vision mechanical

## TWO HOLE STRAP

**FUNCTION:** Designed to support CPVC fire sprinkler pipe horizontally from the side or bottom of beam. It can only be used as a guide on top of beam or on vertical piping, it also acts as a restrainer to prevent the thrust of a sprinkler head during activation when mounted on top of structure. It may be installed onto wood using supplied fasteners or into, minimum 20 gauge, steel using two 1/4" x 1" mounting screws. Features flared edges to protect piping as it slides through the installed fitting and retaining dimples to allow for easy installation onto pipe.

**APPROVALS:** Complies with Underwriters' Laboratories (UL) & (cUL) (EX15649, 770), sizes 3/4" - 2", shanghai vision mechanical

**MATERIAL:** Carbon Steel, with mounting screws

## SEISMIC HANGER ROD STIFFENER

**FUNCTION:** Designed to secure channel to hanger rod for vertical seismic bracing. Slight distortion of the channel/strut may occur upon installation of rod stiffeners. Rod stiffeners are required only on hanger and trapeze that have seismic bracing attached at or within 4" of the rod. A minimum of two rod stiffeners must be installed. Recommended torque is 8 ft.-lbs. or finger tight and one full turn with a wrench.

## ATTACHMENTS

# **Section 7: Attachments**

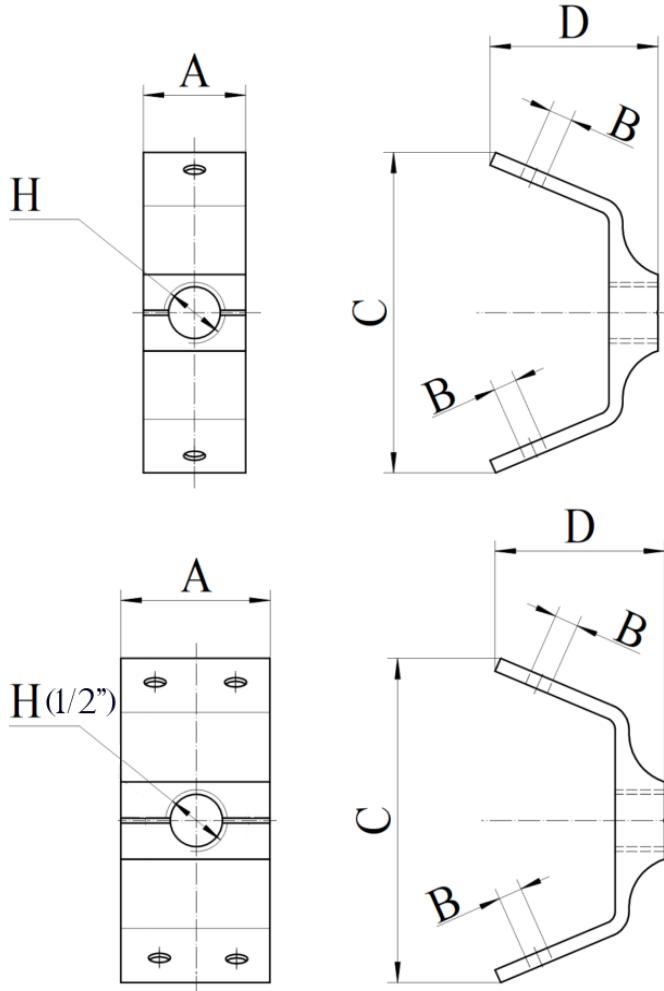

I-QD Aluminum

**ALUMINUM Q-DECK HANGER**

**FUNCTION:** One of the only hangers on the market designed to suspend threaded rod from the Q-Deck. It is the fastest and most economical way to hang plumbing pipes, light fixtures, sheet metal ducts, display fixtures, and other devices from a Q-Deck. Designed to eliminate unsightly holes chiseled or punched in the side of the Q-Deck, weakening the deck, also designed to keep damage to roof insulation to minimum. Designed to be used as a pre-insert in concrete when used on top of deck, by threading the rod up 2 1/2" and putting a hex knot on the rod, where there is concrete poured on top of the Q-Deck.

**MATERIAL:** 6061-T6 Aluminum Alloy

**NOTE:** \*Only the 1/2" Rod Size has 4 holes for securing screws, and width (dimension A) of 1 1/2"

I-FIG 129	Copper Epoxy
I-FIG 129CP	Copper Plated
I-FIG 129SS	SS

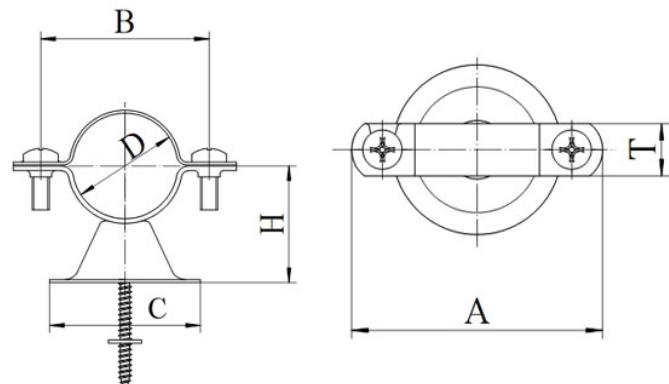

**BELL (VAN) HANGER**

**FUNCTION:** Designed to support copper tubing to wall. Supports the pipe 1" from the back of pipe to wall. Wood screw is concealed upon installation.

**MATERIAL:** Available in Carbon Steel and Stainless Steel

**FINISH:** Available in Copper Powder Epoxy with zinc screw, Copper Plated, Stainless Steel

**NOTE:** Assembled with #6 x 2" coarse thread drywall screw

### ROLLER CHAIR

**FUNCTION:** Designed for supporting pipe lines where horizontal movement may take place due to expansion and contraction, where vertical adjustment is not necessary. The chair can be welded directly to the steel structure or secured in place through bolt holes.

**APPROVALS:** Complies with Manufacturers' Standardization Society (MSS) SP-58 & SP-69 (Type 44). Complies with Federal Specifications A-A-1192A (Type 44).

**MATERIAL:** Cast Iron Roller, with carbon steel Chair, Axle, and Hardware

**FINISH:** Available in Plain, Zinc Electro-Galvanized, Hot-Dip Galvanized, Stainless Steel

## 2-BOLT RUBBER LINED CLAMP

**FUNCTION:** Designed to prevent vibration, noise, and metal to metal contact in application. Versatile, cost effective two-bolt style EPDM rubber lined clamp. Features easy closing mechanism. Age resistant lining designed specifically for plastic pipe applications. Low friction properties allow for expansion, contraction and easy sliding of pipe. Category II noise reduction according to DIN EM ISO 3822-1. Compliant for sound insulation design according to DIN 4109.

**APPROVALS:** Complies with Manufacturers' Standardization Society (MSS) SP-58 & SP-69 (Type 12).

**MATERIAL:** Steel and EPDM Rubber Liner

**FINISH:** Zinc Electro-Galvanized, Hot dip Galvanized.

## SUPERFIX STANDARD DUTY

**FUNCTION:** Designed to prevent vibration, noise, and metal to metal contact in application. Versatile, cost effective hinged style EPDM rubber lined clamp. Features easy closing design for steel pipes and copper tubes. Unique hinged design eliminates the need to disassemble the clamp prior to installation. Clamp can be closed with one hand. Design of the closing mechanism retains strength even when exposed to heat. Category II noise reduction according to DIN EM ISO 3822-1. Compliant for sound insulation design according to DIN 4109.

**APPROVALS:** Complies with Manufacturers' Standardization Society (MSS) SP-58 & SP-69 (Type 12).

**MATERIAL:** Steel and EPDM Rubber Liner

**FINISH:** Zinc Electro-Galvanized, Hot Dip Galvanized.
